

BUNDLED WIND POWER PROJECT IN TAMILNADU, INDIA.

Project Highlights

- Type of project: Renewable Energy
- Type of technology: Wind power
- Project location: India
- Standard: Verified Carbon Standard

The project activity is a grouped Wind power project which involves installation of 396 wind turbines in Tamilnadu, India, co-ordinated by Tamilnadu Spinning Mills Association. The intent of the Project Activity is to reduce GHG emissions and promote sustainable development by use of wind energy for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. The project thus generates approximately 4 559 GWh of Power and thus reduces approximately 4.1 million tCO₂e over the period of 10 years. In the absence of the project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern Indian grid which is predominantly based on fossil fuel
